PROFILE

Software Engineer with 5 years of experience specializing in early-stage, product-focused startups.

Outside of work I have an eclectic mix of interests including travel, linguistics & actively competing as a Judo black belt

ACHIEVEMENTS

Built MVP that secured €3M funding round and gained 120K+ early adopters at Kimo

Developed real-time systems showcased to investors, securing £1.4M investment at Recirculate Systems

Ranked top 0.8% in competitive programming competition (20,000+ participants), and top 3% globally

WORK EXPERIENCE

■ Recirculate Systems
August 2023 - Present

- Built and onboarded customers to MVP showcased to investors that secured £1.4M in investment
- Built real-time application using Go, Next.js, Tailwind, and WebSockets for instant payment provider engagement. Stress tested with 10K+ concurrent connections.
- Built comprehensive CI/CD pipelines for all projects with automated testing and deployment
- Managed all AWS deployments and infrastructure
- Integrated payment providers for secure transactions
- Set up logging systems with automated log rotation
- Supervised sprints as scrum master

EDUCATION

SIR HENRY FLOYD GRAMMAR SCHOOL
2017 - 2019 | A LEVELS

Maths A*	Economics B
Further Maths B	

SKILLS

Strong

Data Structures & Algorithms

System Design & AWS

JavaScript & TypeScript

Python

Go

React.js / Next.js / Native

CI/CD & Virtualization

Competent

DevOps / Docker

Linux

Django

LANGUAGES

English - Native
Spanish - Advanced
Portuguese - Intermediate
German - Intermediate

Ancoris
September 2022 - April 2023

- Maintained and scaled a React platform managing Rentokil's entire UK IoT device fleet (20,000+ pest control units), enabling real-time monitoring for 1000+ field technicians
- Increased test coverage from 62% to 81%, achieving 90%+ on critical paths
- Established scalability patterns that supported growth in device fleet during my tenure
- Resolved production bugs and partnered with QA team to establish regression testing practices, improving overall platform stability

Kimo
June 2021 - September 2021 (4 month contract)

- Built Expo React Native MVP that directly secured €3M funding round, gaining 120K+ early adopters
- Stepped up as de facto CTO after senior departure, architecting v2 transformation based on user data and stakeholder interviews
- Delivered investor demo prototype in 6-week sprint that became cornerstone of successful Series A pitch deck
- Analyzed user behavior metrics and conducted customer interviews, pivoting features that increased retention
- Mentored team of 3 engineers while maintaining aggressive delivery timeline for funding milestones
- Partnered directly with founder on technical due diligence and presenting architecture decisions to VCs during funding

DataZoo
December 2020 - May 2021 (Six month contract)

- Created DataZoo's data analysis UI with Figma, continuously collaborating with the CEO and CTO
- Implemented various JupyterLab-based UI views, tailored for timeseries data analysis
- Sanitized & prepared Plotly and Pandas DataFrames to generate dynamic, interactive graph views for in-depth big data analysis

Human Lambdas
November 2019 - November 2020

- Collaborated with a team of developers to develop the TypeScript React web app for the company's distributed data labeling platform
- Created multiple endpoints for the Django backend including designing the database models
- Joined the startup as a founding team member, witnessing the entire product development process from the beginning
- Engaged in code reviews, working closely with the product manager and senior team members
- Refactored critical portions of the codebase during product iterations, including a complete overhaul of the front end
- Took part in company-wide discussions covering product design, implementation, and overall company strategy
- Received regular mentorship in software engineering and UI/UX best practices from the three other team members
